

No More Leaking Cisterns

Only Clean Water

New German-engineered 60-MIL Elbtal liner will solve the problem for up to 25 years! It is Certified KTW (equivalent to HSF Non-Porous). With the worst leakage, weekly **water replacement can cost you up to \$18,000 a year**. Think about it. That's \$300 a week for a truck of fresh water.

We offer you the peace of mind of solving your cistern problem long term. You won't have to face a big leakage problem every five years, as you do with current fixes.

Cistern leakage has the potential to undermine your home's foundation.

Cistern Water replacement can cost **\$18,000/year.**

That's **\$300/week** for a truck of fresh water!

With the number of cisterns in The Islands that are necessary for fresh water, it is best to work with a known professional when it is time for refinishing and repair. As a waterproofing alternative to Thoro Seal that cracks in cisterns, AquaTek offers a durable 60-MIL liner that carries a 15-Year Water Tightness Warranty. We match this warranty with a 15-Year Workmanship Warranty.

This solves the problem of constant leakage and refinishing repair. Because of frequent seismic activity on The Islands and deterioration of concrete block, you can expect to refinish or Thoro Seal your cistern every five years. This product is Certified KTW (equivalent to HSF Non-Porous).

In addition, sometimes other repairs are necessary to ensure water quality and to prevent the leaking of water that potentially undermines the foundation of your home and creates other issues. We have observed cisterns with such heavy leakage that the owner loses a truckload of water per week. With the average truck of 3,000 gallons of water costing \$300, that could mean a cost of \$18,000 per year in water loss.

Cistern Repair by AquaTek

We recently repaired two cisterns that had both been Thoro Sealed two or more times in one year. There was no success in stopping the leaks with Thoro Seal because of the constant seismic activity that we experience here in the Virgin Islands.

Our Elbtal liner is a permanent solution, no matter how many cracks or leaks you may have. It also doesn't matter how new, or old the cistern is, what it is made of or what shape it is in.

Both of these cisterns were being filled twice a week by water trucks at around \$600 a week for each, just to keep water in the house. Since we installed the liner, the cisterns haven't lost a drop of water.

What's unique about welding this liner inside of the cistern is that any conventional prefabricated liners would not have worked because there were pillar supports in the chamber. A prefab cannot be made to work in this situation. The liner can be installed in cisterns of any shape or form.
